

[Document Title] Abstract

[Abstract]

[Problems] It's intended to provide an agent being capable of enhancing gene transfer efficiency in a gene transfer mediated by an adeno-associated virus vector while retaining the advantages of the adeno-associated virus vector.

[Means for Solving the Problems] A gene transfer efficiency enhancer in a gene transfer mediated by an adeno-associated virus vector, the enhancer containing a histone deacetylase inhibitor (especially FK228) as an active ingredient.
